

POSITIVE PRESSURE SYSTEMS

SmartVent

An effective home ventilation system may well be just a low-cost product that keeps moisture build-up at bay.

An efficient system, however, is an investment that delivers the quality of life we now expect as the minimum for in-home comfort.

SmartVent offers a wide range of home ventilation solutions with systems designed to best suit the specific needs of any home today.

Outside Air - Fresh air drawn in from outside

Exhaust Air - Moist, stale air forced out of the home

Fresh air in, stale air out

Positive Pressure Systems are ideal for managing moisture and humidity within your home. These systems draw in fresh air from the roof cavity and filter it before distributing the clean air around your home via a network of ceiling diffusers. The air movement forces the moist, stale air that causes condensation, mould and mildew out.

In winter especially, good air circulation and home heating are essential for maintaining indoor air quality. A home ventilation system from SmartVent reduces the excess damp, moisture-filled air and improves the overall air quality inside your home, making it much healthier for you and your family. A good investment for the well-being of your family and the overall health of your home.

*For those who want to
safeguard their family
and their home.*

*SmartVent Home Ventilation Systems
are recommended and installed by qualified electrical
and HVAC contractors across the country.*

5-year warranty

Simx sources only the highest quality componentry and as such, all SmartVent systems are supported by a 5-year warranty.
